

Joining multiple tables

You can join more than two tables as long as you specify the columns that link the tables together

```
SELECT hs.year, hs.country, hs.happiness-score
       cs.continent, ir.inflation-rate
FROM happiness-score hs
LEFT JOIN country-stats cs
ON hs.country = cs.country
LEFT JOIN inflation-rates ir
ON hs.year = ir.year
AND hs.country = ir.country-name
```

from happiness-score
from country-stats
from inflation-rates

year	country	continent	inflation-rate
2015	India	Asia	8.9
